

THE MOST

advanced workplace management technology.

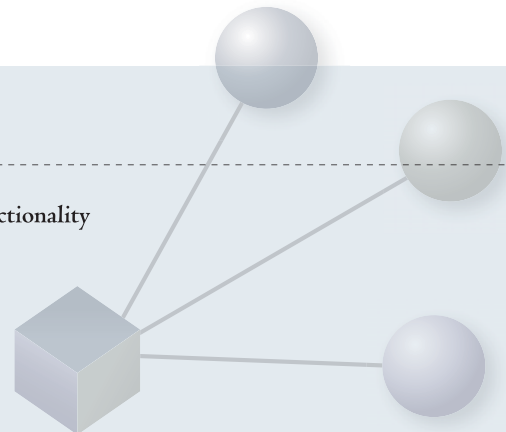

BRG has a proven track record of implementing innovative Integrated Workplace Management Systems (IWMS) that assist our clients in meeting their strategic vision. Our subject matter expertise combined with the industry-leading IWMS packages help ensure a successful solution deployment. BRG's capabilities with **multiple software platforms and technologies** can facilitate finding the right combination of functionality while fitting in with the existing organizational culture and technology environment.

BRG's Technology Solutions enable **streamlining of processes to cut costs and create shorter cycle times**. Realize your vision by having BRG help you:

- **Personalize the navigation and forms within your IWMS solution** to define focused roles and assign clearly defined application tasks and data entry forms to those roles.
- **Integrate your IWMS solution to interoperate with other enterprise tools and platforms** such as SAP,[™] PeopleSoft,[™] LDAP, Remedy,[™] Banner[™] and ESRI[™] to avoid repetitive data management.
- **Develop management dashboards and scorecards** to monitor your Key Performance Indicators that drive excellence in the workplace.
- **Create new management applications and add-ons** to extend the functionality of your Integrated Workplace Management System.
- **Arrange workflows** to automate communication and routing of critical dates, reviews, approvals and reporting of mission critical data.
- **Define effective application and database system security models** to provide role-based access to data in your IWMS solution while sheltering users from confidential information and unnecessary details.
- **Train your end users and system administrators** to effectively use the tools, manage change and get the most out of your investment in technology improvements.
- **Support your on-going needs** for troubleshooting and system augmentation through our technical support help desk, Internet forums and on-call staff.

WHAT WE DO

- Plan and design system architecture and functionality
- Stage and test solution components
- Collect, normalize and populate data
- Implement and train system users
- Provide on-going support and maintenance
